

What is the Pre-Heat Function in a Gas Water Heater?

What is this for?

The purpose of the preheat function is to reduce hot water delivery time from 1 minute to 5 seconds.

Do I need the function?

The pre-heat function is beneficial for houses with long piping systems, such as those in double-storey homes, landed properties or penthouses.

For **smaller homes (2-3 units)**, waiting time is 30 second or shorter.
