

WATER PIPE STOP VALVE

Three valves types, **three ways to fail**

LEAST DURABLE

MINI BALL VALVE

- > UV Seal Degradation
- > Thin wall expansion

MODERATE

GATE VALVE

- > Internal gate seizes
- > Stem strips

MOST DURABLE

FULL BALL VALVE

- > Most robust
- > Degrades over > 10 years

OLD STOP VALVE

- 50% of old stop valves cannot be reused.
- 30% of stop valves that "work" during the replacement cause a follow-up problem.
- The valve that "**worked**" today **may not work in six months** or **2AM** when heater is leaking.

NEW STOP VALVE

The **\$80** buys a valve you can trust for the **next 10 years**.

We replace it regardless of type, regardless of whether it still turns.
